Line Studio by CircaCircuits

Windows 10 / 11 · 2026

Design the line, program the PLC, and test both before anything is built.

CircaCircuits Line Studio 2026 is a Windows program for designing material-handling lines. Lay out conveyors, sorters, storage and pallet cells; it writes a working PLC program in the style of your PLC. Press Run, break it and fix it at your desk, then hand over the drawings and program.

Demo project: the line in 3D, the PLC program live, and the throughput report naming the bottleneck.

Design

- Conveyors, lifts, spirals, merges
- Shoe and cross-belt sorters, diverters
- Storage aisles, palletisers, AMR fleets
- Snapping, dimensions, prefabs, 3D view

Program

- Starter program written from the layout
- Seven PLC makers' styles
- Ladder and SCL / Structured Text
- Zone, merge and sorter library

Test

- Run the program against the line
- Faults: photo-eyes, jams, drives, power
- Shift-long tests in seconds; live PLC link
- Throughput, heat-map, bottleneck

Hand over

- A3 plan drawing and DXF for CAD
- Wiring sheets, equipment and I/O lists
- Program as .L5X, SCL or PLCopen XML
- Training challenges; shared team projects

It should feel like the programs you already trust. A real Windows program, not a web page.

Fast start. Work in seconds; big layouts stay smooth.

Files on your disk. Autosave and crash recovery bring work back.

Never locked out. A lapsed licence still lets you open and save.

Live PLC, nothing to install. Modbus TCP and OPC UA built in.

Signed updates. A failed one leaves your copy as it was.

Monthly

$100 a month, per person

Pay as you go and stop when the job is done.

Yearly

$1,000 a year, per person

Two months free compared with paying monthly.

Students

30 days free

With a school email address. No card. Started from the program.

Everything is in every seat, with no feature tiers, plus a logic assistant for paid seats. **One price for everyone**: engineers, teachers, integrators and companies. A seat is one person on one PC at a time; companies buy several seats and assign them by email. **Offline PCs** use a licence key from your account: the same paid seat, no extra cost. Prices in US dollars, plus tax where it applies. Cancel any time.

Download for Windows 10 and 11

Install it, sign in with a CircaCircuits account, and design your first line.
